Each editor represents MARINE BIOLOGY for the country, or geographic area, indicated in brackets after his name. He is fully responsible for manuscripts edited by him. (Manuscripts from areas not yet covered by the Journal may be sent to the nearest editor.) The date of final manuscript acceptance and the name of the responsible regional editor will follow each respective printed contribution.

In regard to the scientific merits or pertinency of manuscripts submitted, regional editors may consult the advisors, a group of experts chosen to represent adequately the various fields of research covered by the Journal. The final decision of manuscript acceptance rests with the editor in chief.

Four issues of MARINE BIOLOGY constitute one volume of about 360 pages. The price per volume is DM 156.— plus postage. In order to facilitate fast publication, the number of issues published per year will depend on the number of high quality manuscripts received.

Scope of Marine Biology

The editors will consider for publication original contributions (preferably in English, but French or German manuscripts are also acceptable) to the following fields of research: zoology (including fisheries), botany, and microbiology. Areas of particular interest are:

a) *Ecological dynamics:* Production, transformation and decomposition of organic matter; energy flow and balance; commercial fisheries; food chains; biological oceanography; population dynamics; use and management of organic resources of the sea; water pollution.

b) *Cultivation of aquatic organisms* (aquaculture) for scientific and commercial ends; farming of fishes, crustaceans, molluscs, algae, etc.; life histories; nutritional and environmental requirements; diseases.

c) *Experimental ecology and physiology:* Effects of environmental factors on tolerances, rates and efficiencies of performance (metabolism, activity, growth, reproduction) and on external and internal structures; experimental biosystems; regulation (ion-, volume-, osmo-, turgor-, thermoregulation); orientation; migration; biological rhythms; behavior; adaptation.

d) *Molecular biology; biochemistry; genetics; morphology and evolution of marine organisms.*

e) *Underwater exploration and experimentation.*

f) *Biogeography; distributions; zonations; communities; ecosystems.*

g) *Theoretical biology:* Concepts and models of quantification and mathematical formulation; system analysis; information theory.

h) *Technology:* Apparatus and techniques employed in marine biological research.

Comparable information on limnic organisms may be considered for publication if it contributes to marine biological knowledge. Papers on physical, chemical or geological oceanography are only acceptable if they are immediately pertinent to marine biological problems.
